Agriculture In School

An almost perennial subject of discussion in the school curriculum, what it should and what it should not contain. Many there are who contend that the present-day curriculum is too crowded with subjects and contains much that should not be there, others, including numerous organizations, who are constantly demanding that this or that new subject be added. For example, there are those who strongly advocate the teaching of temperance, not to mention the wider meaning of that term, but in direct relation to the use of intoxicants. Others insist that religion should be taught, while others again object to recitation of the Lord's Prayer or the Ten Commandments. Still others call for the teaching of co-operation, the meaning and use of money, and the use of so-called social subjects and problems which different groups insist should be included in the curriculum are almost beyond calculation.

The real difficulty seems to lie in the opposing views held as to what is education, and what is the function of the school in providing it to the youth of the land. Is it the main function of the school to impart information, or is it to develop and train the mind and intellectual powers of the student as to equip him or her for the battle of life irrespective of the sphere in which they may live or the particular activity in which they may be engaged? If the former, then a very extensive curriculum would be necessary to enter to all classes of students; if the latter, a fairly short and condensed curriculum might serve all.

There is one subject, however, apart from the rudimentary subjects such as reading, writing, arithmetic, geography, history, composition, etc., which it has been generally agreed that should be included in the western provinces of Canada, and that is, agriculture. Addressing the recent annual convention of the Canadian Society of Technical Agriculturists at Edmonton, Dr. R. C. Wallace, president of the University of Alberta, stressed this particular aspect of present-day curricula in the schools. Having stated that a good deal of thought has been given in past years to the kind of education in agriculture which can best be introduced into the school curriculum, Dr. Wallace said that it had to be frankly admitted that relatively little success had attended the efforts of those who are concerned with school education in the teaching of agriculture; that the formal agriculture of grade IX and X, of the high school and on the whole, not what was expected of it; and that the school garden, so enthusiastically proclaimed thirty years ago, cannot be seen in Western Canada to-day.

While stating that it would necessitate going too far afield to discuss all the underlying difficulties—lack of trained teachers, discontinuity of school life during the growing season, etc.—Dr. Wallace said it had been learned that in public and high school it was science and not the art of a vocation that could be taught successfully. For that reason, he was of opinion that successful work in agriculture in the public and high school will come incidentally to the study of natural science. If the applications of the principles of science were continuously made in plant and animal processes, in weather lore, and in soil processes, interest in agriculture and in agricultural procedure would grow naturally out of the underlying scientific principles which have universal application; and the teacher would not be placed in the compromising position of posing, unwillingly, as an expert in a field where he or she was not accepted. That would be, he felt, the emphasis of the future.

On the other hand, Dr. Wallace pointed out, there had been real success in boys' and girls' club work, and in school fairs in which agricultural projects had played their part, mainly because the activities were extra-curricular and conducted in the realistic atmosphere of the farm with the help of trained district agriculturists. In no far as these projects were honestly carried out by the young people themselves, they were of great educational value which had yet been achieved in the vocational activity in agriculture of school-boys and girls. The unfortunate fact was that this system, as yet, did not reach all schools and school children in the rural districts.

These observations by Dr. Wallace would seem to merit the serious consideration, not alone of Provincial departments of education and agriculture, but of the school boards, even though the latter are the trustees of rural schools and directors of agricultural societies. Dr. Wallace places stress on those scientific truths which are fundamental, which must be recognized and obeyed if success is to be achieved. These can be learned in school through the natural science course, even though such course may not be distinctly labelled agriculture. Successful agriculture cannot be learned wholly from a book, or through a study course, any more than can carpentering or any other trade. But if pupils are sent out from the schools well grounded in fundamentals, made acquainted with the immutability of Nature's laws, with intellects trained to observation, to the detection of the truth from the false, imbued with initiative and ambition, they will be primarily equipped for a career in agriculture or in any profession they may choose.

Flying Fish

Flying fish do not get off they do not flap their wings, but merely glide through the air. After getting up, spend in the water, the fish takes to the air and with current momentum do the rest. Considerable speed is attained and a distance of 100 feet is often covered by these fish.

Heard It Anyway

Although he sat only a few hundred feet from the bandstand, a visitor at a musical festival in Ontario, heard the musicians from a distance to the air and wind current. Unhappily, the hand concert from where he was sitting, the man turned on his car radio and picked up the program from Chicago. 2109

Likes Life In The Arctic

Quebec Girl Spends Two Years In The North, And Is Going Back Again

Cities have no attraction for Marie Orslet, 20-year-old Gaspe girl, she found city life "empty" when she visited Montreal after two years at Cameron Bay, mining settlement on Great Bear Lake, near the Arctic circle.

Marie spent a few days with her sister at Montreal, then left for her home in Gaspe. Late in the summer she expects to marry a young mining engineer, a graduate of Queen's, now in the Athabasca district, and return to the north to live.

In the summer of 1933 Marie, then 18 and fresh from the sheltered life of a convent, set out from Gaspe for Cameron Bay to visit her brother whom she had not seen for eight years. Travelling by rail to Peace River she joined a party taking in supplies. Then began a hazardous journey by boat through the Peace river, Lake Athabasca, Slave river, Great Slave lake and the Mackenzie and Great Bear rivers.

When the party reached Fort Franklin, 250 miles from their destination, Sept. 1, the water was freezing fast, and there was no hope of navigating Great Bear Lake that season. A plane was chartered to complete the trip, and Marie had her first experience of flying. Trips by airplane to visit silver and pitchblende mines in the vicinity among her later experiences. It was some time, however, before she was permitted to go down into the mines. The miners were superstitious about women in the workings.

At Cameron Bay, where Marie was one of eight white women, she had some of time to observe the life and customs of the Indians and Eskimos. She preferred the latter, she said, because they were cleaner in their habits than the Indians.

Wives among the Eskimos may be bartered just as are articles of commerce. Marie told of one occasion when an Eskimo offered his wife and two daughters in exchange for a fine rifle which he coveted. Stealing Marie's rifle, however, she was a serious crime, for which, in the Eskimo idea of justice, death is the punishment.

Gulls Fond Of Cherries

Have Their Own Method Of Securing The Fruit

A remarkable case of birds minding a new situation by a change in their characteristic behavior has just been reported to the U.S. Biological Survey. The birds are the gulls at Salt Lake Valley of Utah. They are fond of cherries, and when orchards have sprung up through the territory in the last few decades.

Now the gulls with their clumsy feet, cannot admit that relatively little success had attended the efforts of those who are concerned with school education in the teaching of agriculture; that the formal agriculture of grade IX and X, of the high school and on the whole, not what was expected of it; and that the school garden, so enthusiastically proclaimed thirty years ago, cannot be seen in Western Canada to-day.

While stating that it would necessitate going too far afield to discuss all the underlying difficulties—lack of trained teachers, discontinuity of school life during the growing season, etc.—Dr. Wallace said it had been learned that in public and high school it was science and not the art of a vocation that could be taught successfully. For that reason, he was of opinion that successful work in agriculture in the public and high school will come incidentally to the study of natural science. If the applications of the principles of science were continuously made in plant and animal processes, in weather lore, and in soil processes, interest in agriculture and in agricultural procedure would grow naturally out of the underlying scientific principles which have universal application; and the teacher would not be placed in the compromising position of posing, unwillingly, as an expert in a field where he or she was not accepted. That would be, he felt, the emphasis of the future.

On the other hand, Dr. Wallace pointed out, there had been real success in boys' and girls' club work, and in school fairs in which agricultural projects had played their part, mainly because the activities were extra-curricular and conducted in the realistic atmosphere of the farm with the help of trained district agriculturists. In no far as these projects were honestly carried out by the young people themselves, they were of great educational value which had yet been achieved in the vocational activity in agriculture of school-boys and girls. The unfortunate fact was that this system, as yet, did not reach all schools and school children in the rural districts.

These observations by Dr. Wallace would seem to merit the serious consideration, not alone of Provincial departments of education and agriculture, but of the school boards, even though the latter are the trustees of rural schools and directors of agricultural societies. Dr. Wallace places stress on those scientific truths which are fundamental, which must be recognized and obeyed if success is to be achieved. The Lunar Eclipse

A lunar eclipse is caused by the direct alignment of the sun, earth and moon, with the moon passing through the umbra cone, stretching about 80,000 miles into space. The long duration of the last eclipse—1 hour 40 minutes and 18 seconds—is caused by the moon's passing through a thick portion of the cone approximately 228,000 miles away from the earth.

NATURE'S MINERAL SALTS

Cleanse the system—purify the blood—strengthen the nerves—relieve of constipation, indigestion, rheumatism, etc.

SASKASAL

South Africa Celebrates

New British Dominion Was Formed 33 Years Ago

In the hectic period of the King's silver jubilee another has been overlooked, that of the Union of South Africa. It was in the summer of 1910 that the former Boer republics of the Transvaal and the Orange Free State joined with "The Cape" and Natal to form another British dominion overseas.

The Boer War had ended some nine years previously, and thanks to the vision, the generous trust of Sir Henry Campbell-Bannerman, Liberal prime minister, the Dutch people were granted a free constitution within the British Empire instead of being treated as a conquered nation instead of their independence being taken from them they were given greater freedom than they even had under "Oorlog" Paul Kruger.

There were, and probably are still among the older Afrikaanders, a few reactionaries, but the great majority are, if not ardent Britishers, so-called Afrikaners and Britishers next—which is about the situation in Canada—Canadians first, then loyal Britishers. Their loyalty was not tested to foment an anti-British rising. A small number did make themselves troublesome, but Boer and Britain continued to be German forces and soon put an end to German influence in South Africa.

There is no sturdier Britisher in the Empire than the former Boer general, Jan Smuts, who has one of the finest minds in the world, and General Hertzog, the prime minister, has also become a firm friend of British South Africa has a white population of about two millions, 55 per cent. Dutch and 40 per cent. English. The country is very prosperous chiefly owing to its vast gold belt, and it can look forward to the future with confidence. —St. Thomas Journal.

Has Lived On Farm

Canada's Second Woman Senator Eight Years In Saskatchewan

Canada's new woman senator known from first hand, of life on a Saskatchewan farm. She is Mrs. Howard Falls, and she was recently appointed to the senate.

Mrs. Falls, in the days gone by, once lived for eight years on a farm in Saskatchewan, according to word from the farm.

An eloquent and public spirited wife of a Peterborough, Ontario, farmer, Mrs. Falls holds the distinction of being the second woman member of the Canadian senate. She is the third of her sex to hold a seat in Canada's parliament, and the only woman on the governing side of the red chamber.

The name of Mrs. Iva Campbell is well known among the list of 10 senators named by Prime Minister R. B. Bennett. She combines the ability of performing most of the heavy work of the senate. In February, 1930, shortly after the judicial committee of the privy council had decided in Canada, men were "persons" and entitled to all the prerogatives enjoyed by men in respect to government, the then prime minister, W. L. Mackenzie King, summoned Mrs. Cairine Wilson, of Ottawa, to the senate. She was the first woman senator, and the second woman to become a member of Canada's parliament.

Long before that, in 1921, Miss Agnes MacPhail, a grey county farmer's daughter and school teacher, was elected to the House of Commons. She is now a member of the senate and was the first of her sex to take a seat in the Dominion parliament and has been returned at every general election since.

Damage Has Been Repaired

Last Evidence Of Zepellin's Havoc Disappears From London

Last visible evidence of the havoc wrought on London and suburbs by World War Zepellin's has disappeared. A waste block near Ely-place, in Canberwell, where three houses were blown to pieces by a 1917 air raid, has been cleared for a row of modern buildings. It was supposed to be the last remaining ruin of the World War Zepellin's has disappeared. A waste block from the House of Parliament is heavily pockmarked.

Health Of The World

Population Of Most Countries Retains Good Health During Years Of Depression

According to the data supplied by the League of Nations Year Book, it looks as though mankind not only could take the depression, but waxes healthy under its vicissitudes. The death rate in all except three of the thirty countries reporting was less than the average in the prosperous years 1926 to 1930. The birth rate average also fell, rising slightly in the last year in five of the countries, namely, Germany, Great Britain, Ireland, Poland and Denmark. Germany has a long lead in this regard, her population increasing 7.1 per 1,000, twice as fast as in 1933, and seven times faster than that of France, and more than twice as fast as that of Great Britain, where it was 3.3 last year. United States for 1933 was 5.7.

The League book does not touch upon the cases of mental illness, but a study made by the United States National Committee for Mental Disease and the American Psychiatric Association, asserts that mental ailments have shown no increase since the depression, a finding that is contrary to the general impression—Winnipeg Free Press.

Completes Long Trip

Dutch Submarine Travels From Holland To West Indies

The most ambitious trip ever undertaken in any submarine ended recently when The Netherlands Navy's K-6 arrived at Amsterdam from Surabaya, East Indies, having left Helder, Holland, on November 14 last, covering a distance of more than 2,000 miles.

The submarine, under her own power and without an escort, visited five continents. The trip included fifteen, twenty and twenty-five-day stretches without a break. The submarine dived 280 times, remaining under water for 264 hours. The crew of 35 men was under Commander G. E. Hetherway, also aboard being Professor Felix A. Vening, of Utrecht University, charged with scientific observations. The latter made the deepest sounding ever made in the Indian Ocean, reaching 6,700 metres between Dakar and Pernambuco.

The stockyards at Williams Lake, B.C., lie in the centre of a miniature empire, with the Cariboo country to the east and the Chilcooten country to the west. An idea of the size of this territory may be gauged from the fact that it takes three weeks to drive cattle to the stockyards from the world's largest ranch, where the bulk of the cattle which comes from the west of the Chilcooten river requires ten days to take the trip.

Looking For Proof Hendrick Willem Van Loon, noted Dutch-American historian and traveler, who recently commenced a radio program from New York, at a boy of 11 in Rotterdam spent three days watching a statue of Erasmus to see if the bronze figure really did turn a page of his book every hour, as the legend said.

Suitor—And where is your sister, Jimmy? Jimmy—She just ran upstairs to change rings when she saw you coming.

Personalography

Mr. and Mrs. C.L. MacGregor and family returned on Sunday from a three weeks holiday in Manitoba.

Mrs. R. Poxon, Mrs. J.H. Oliphant, Mrs. Cyril Oliphant and Sam Poxon returned on Saturday from a few days holiday at Banff.

The S.P. Torrance family and Gordon Hay returned last Thursday after a short holiday.

Dr. Elliott, Tom Moss and son of Swatwell were in town on Thursday.

The Anglican Church members at Pine Lake last Wednesday had rain weather and on their return did not get back to Carbon till the following morning.

Mr. and Mrs. Hilton and granddaughter of Ferrie, B.C. spent a few days in Carbon last week.

Miss Gertrude McEwen of Cremona, spent the past week visiting at the J.H. Oliphant home.

S. I. Garrett is building a ladies' rest room at the front of his garage, J.C. Road is the main one.

Rev. McNichol attended the funeral service for the late Rev. Watt, at Aldrie last Friday.

Miss Molly Laing returned to her home near Carbon on Monday, after spending the past week visiting with relatives in England.

Mr. and Mrs. Burnett, and daughter, Miss V. Burnett, left for their home in Michigan State last Friday after a couple of weeks visit with Mr. and Mrs. W. Litch.

Mrs. Jas. Smith spent Tuesday in Calgary.

Don't forget to hear Alberta's Premier, H.G. R. H. and A.R. Claverton, M.L.A., tomorrow (Friday) at 2:30 p.m. in the Farmers' Exchange hall.

Norman Nash, Bruce Ramsey and Malou Ramsey are attending the tennis championships at Calgary this week.

A memorial service was held at Christ Church, Carbon, for the late Mrs. Hammel, who passed away at the home of her daughter in Portland, Oregon, on July 25. Mrs. Hammel had been an active worker and member of the church for a number of years, and her passing is deeply regretted by all.

Mr. Burns of Three Hills district was a Carbon visitor last Wednesday.

FOR SALE—22-42 Twin City all-steel separator—Apply to Peter Nielsen, Teesloth Alberta.

John Earle of Acme spent Saturday in Carbon on official business.

Rev. and Mrs. Wm. McNichol left this week for a couple of weeks holiday, and there will be no services at Carbon United Church on August 11th and 18th.

Pete Nielsen and daughter, Gladys, returned from Victoria and arrived in Carbon on Sunday. Mr. Nielsen is out for the harvest operations on his farm in the district.

At a baseball game at Granger on Sunday the Granger team won from the Midland team of Drumheller by a 16-5 score. A large crowd from Carbon attended the game.

E. P. Foster and Mr. Johnson, who were killed to speak at Carbon last Friday night, did not arrive. There had been some mix-up in dates and the meeting was held at Granger. The meeting, however, was held at Carbon last night, and we will endeavor to get a report in our next issue.

LETTERS TO THE EDITOR

(continued from front page)

ed to import large quantities of raw material to keep New Industries going, and also food stuffs to feed her population. To carry on and survive she required a great deal of foreign financial credit, and this was denied her as her new credit system was not acceptable to those who controlled financial credit, so the people of Germany were starved for foodstuffs, and her industries were at a standstill because they could not get material to run them and the result was chaos and distress for her people, till she too bowed to the will of money power and recognized their privilege, and accepted it.

Now, after reviewing the difficulties and dangers that beset the above nations, I must say that it is utterly absurd for anyone to say that "you are in power and I will give the people of Alberta economic security by the creation of a new credit system within the province. Mind you, this is to be done in a province which has not any power to issue currency, no money tokens; a province that has a large surplus of agriculture products to export; a province that is far away from foreign markets, and that is hundreds of miles from seaboard; a province that does not own or control any transportation facilities, and a province that must depend on the national and international financier for a line of credit before it can import or export goods. A province that must import 85 per cent of its desires, and must export the larger portion of its production to outside markets to be able to carry on. Is it the possibility of an overgrown child, or is it the ravings of an egotist who says "we can do it" but never says how it can be done.

Dear Reader, can you come to any other conclusion after reading the above, that no one but a madman would say that things can't be worse in Alberta. But in power Provincial Social Credit, and you farmers will not use financial credit to move your surplus products, and you will not get any aid from the federal government to market your wheat. What a tragedy!
